Barrington, RI • 401-862-2003 • bullern22@gmail.com • linkedin.com/in/noahbuller

EDUCATION

Lehigh University

August 2022 - May 2026

Bachelor of Science in Computer Science and Business

GPA: 3.62

- **Select Courses:** Discrete Structures & Algorithms, Operating System Design, Database Systems, Computer Architecture, Business Application Design, Web Systems Programming, Business Communications, Accounting

PROFESSIONAL EXPERIENCE

Javelin

March 2025 - March 2026

Software Engineer Intern - Remote

- Developed a serverless microservice in Go on AWS Lambda to validate 12 API keys twice daily, adding retry logic and DynamoDB failure logging to increase consistency in API requests; documented the service architecture and failure-handling design for team reference
- Engineered a dynamic search-query builder supporting 8 user-facing inputs across 7 PostgreSQL tables and roughly 5,000–6,000 rows, using indexed queries and cross-table checks to increase search speed and reduce invalid query responses
- Integrated Zod-based server-side validation across 8 user-input RESTful API routes to enforce runtime schema checks, adding Jest test coverage and shipping through a CI/CD pipeline with automated PR checks

Certifydoc

May - July 2024

Software Engineer Intern - Barcelona, Spain

- Collaborated with a team of 5 engineer interns to build a Next.js and React web application across 3 core screens for media upload and account workflows, integrating with existing APIs and backend logic
- Reimplemented hashed credential storage and secure session handling in the new application to preserve a secure authentication flow across frontend and backend systems

LEADERSHIP EXPERIENCE

Lehigh University Brazilian Jiu-Jitsu Club

March 2024 - May 2026

Secretary and Cofounder

- Helped found Lehigh University's first Brazilian Jiu-Jitsu club and grew membership from zero to 200+ in GroupMe, including a peak event attendance of 65 members through outreach and member engagement
- Coordinated weekly reminders and biweekly events through email and GroupMe, helping run over 90% of practices and organize meetings with officers and coaches

PROJECT EXPERIENCE

LockerRoom

April 2026

- Built a Next.js sports platform with Supabase realtime chat, authenticated room messaging, and live sports data routes for scores and summaries
- Developed backend API routes for auth callback handling, room message retrieval/posting, and sports-specific event pages
- Utilize Codex to accelerate frontend component design and iterate on UI patterns, reducing solo development time on authenticated room views

Headlines and Sidelines

February 2026

headlinesandsidelines.com

- Developed a full-stack sports news platform with React/TypeScript, FastAPI, and PostgreSQL, using Cursor as an AI coding agent to accelerate backend development, generate test coverage, and debug the Python/FastAPI layer
- Integrated ESPN's sports data API through a Python backend proxy with Redis caching for live NBA, NHL, and soccer scores, moving score fetching off the client to improve reliability and reduce repeated API calls

AigentZ & iQube Protocol

January - December 2025

- Engineered AI agent integrations (OpenAI, DeepSeek) enabling natural language querying of blockchain-secured personal data as a precursor to the implementation of an agentic workflow for user-facing data interaction
- Owned the cloud infrastructure migration, configuring EC2, GoDaddy DNS and name server routing, Route 53, Secrets Manager, and Amplify to move the project from a reverse-proxied local prototype to a stable production environment

LU Bank Database

September - December 2024

- Built a Java CLI banking application with a JDBC-connected PostgreSQL backend, managing multi-step financial transactions (deposits, withdrawals, loan and credit card payments) with explicit transaction control to guarantee atomicity across multiple coordinated table updates per operation
- Designed a normalized relational schema with foreign key constraints and database triggers, separating customer-facing and administrative workflows into modular components to support secure account management across 30+ simulated users

TECHNICAL SKILLS

- Languages and Frameworks: Java, Go, JavaScript, TypeScript, Python, SQL, React, React Native, Next.js, REST APIs
- Cloud and DevOps: Git, Docker, Kubernetes, Redis, AWS (Lambda, EC2, S3, Route 53, Amplify, Cognito)
