EDUCATION

Lehigh University — August 2022 - May 2026
Bachelor of Science in Computer Science and Business — GPA: 3.62
Honors: Graduated with High Honors · Dean's List (5 semesters) · Upsilon Pi Epsilon (UPE)
Select Courses: Data Structures & Algorithms, Operating Systems, Business Application Design, Web Systems Programming

PROFESSIONAL EXPERIENCE

Javelin — March 2025 - March 2026
Software Engineer Intern - Remote

- Built a Go AWS Lambda microservice to validate 12 API keys on a cron schedule, triggering SES email alerts to developers on failure and replacing a previously silent failure state with proactive monitoring for key rotation incidents
- Engineered a dynamic search-query builder for D1 track athlete data with 8 filter inputs across 7 PostgreSQL tables, implementing a single source of truth that eliminated duplicate results and SQL failures; users went from frequent inaccuracies to near-100% result accuracy across pre- and post-search filtering
- Integrated Zod runtime schema validation across all 8 REST API routes and wrote Jest test coverage, enforcing schema checks at the CI/CD PR stage to catch malformed requests before reaching production
- Built a Notes feature end to end in TypeScript, React, and PostgreSQL, owning the editor UI, rendering layer, and database schema to deliver a reusable full-stack component from scratch

Certifydoc — May - July 2024
Software Engineer Intern - Barcelona, Spain

- Collaborated with a team of 5 engineer interns to build a Next.js and React web application across 3 core screens for media upload and account workflows, integrating with existing APIs and backend logic
- Reimplemented hashed credential storage and secure session handling in the new application to preserve a secure authentication flow across frontend and backend systems

LEADERSHIP EXPERIENCE

Lehigh University Brazilian Jiu-Jitsu Club — March 2024 - May 2026
Secretary and Cofounder

- Helped found Lehigh University's first Brazilian Jiu-Jitsu club and grew membership from zero to 200+ in GroupMe, including a peak event attendance of 65 members through outreach and member engagement
- Coordinated weekly reminders and biweekly events through email and GroupMe, helping run over 90% of practices and organize meetings with officers and coaches

PROJECT EXPERIENCE

LockerRoom — April 2026

- Built a Next.js sports platform with authenticated room messaging and live sports data routes for scores and summaries
- Architected Supabase Realtime pub/sub to support near-instantaneous message delivery across simultaneously active rooms

Headlines and Sidelines — February 2026
headlinesandsidelines.com

- Developed a full-stack sports news platform with React/TypeScript, FastAPI, and PostgreSQL, using Cursor as an AI coding agent to accelerate backend development, generate test coverage, and debug the Python/FastAPI layer
- Integrated ESPN's sports data API through a Python backend proxy with Redis caching for live NBA, NHL, and soccer scores, moving score fetching off the client to improve reliability and reduce repeated API calls

AigentZ & iQube Protocol — January - December 2025

- Engineered AI agent integrations (OpenAI, DeepSeek) enabling natural language querying of blockchain-secured personal data as a precursor to the implementation of an agentic workflow for user-facing data interaction
- Owned the AWS cloud infrastructure migration, configuring EC2, Route 53, Secrets Manager, and Amplify to move the project from a local reverse-proxied prototype to stable production, cutting build and deployment time from ~3 minutes to under 1 minute

LU Bank Database — September - December 2024

- Built a Java CLI banking application with a JDBC-connected PostgreSQL backend, managing multi-step financial transactions (deposits, withdrawals, loan and credit card payments) with explicit transaction control to guarantee atomicity across multiple coordinated table updates per operation
- Designed a normalized relational schema with foreign key constraints and database triggers, separating customer-facing and administrative workflows into modular components to support secure account management across 30+ simulated users

TECHNICAL SKILLS

- Languages and Frameworks: Java, Go, JavaScript, TypeScript, Python, SQL, React, Next.js, REST APIs
- Cloud and DevOps: Git, Docker, Redis, AWS (Lambda, EC2, S3, Route 53, Amplify, Cognito)
